PROFESSIONAL SUMMARY

Senior Mobile Engineer with 8+ years building Flutter and React Native apps across fintech and mobility. I own payment flows, native integrations, and iOS and Android releases, and I have led delivery and mentored distributed teams. I currently build cross-border payments at Banffy (BanffPay).

TECHNICAL SKILLS

Mobile	Flutter, Dart, React Native, TypeScript, Expo, native modules and platform channels (Swift/Kotlin), Core NFC, Google MLKit
State & Architecture	Riverpod, BLoC/Cubit, MobX, Redux Toolkit, RTK Query, TanStack Query, Clean Architecture, Feature-Sliced Design
Payments & Security	Stripe, Paystack, Wave, Remita, Kora IDV (KYC), idempotency, refresh-token sessions, biometrics, Keychain / EncryptedStorage, AWS Secrets Manager
Release & Quality	App Store Connect, Play Console, Fastlane, Codemagic, EAS, Shorebird, Stallion OTA, Jest, Detox, Maestro, Flutter tests, Sentry, Firebase
Backend	Python FastAPI, Laravel (PHP), REST, GraphQL, WebSockets, PostgreSQL, Redis

WORK EXPERIENCE

Senior Mobile Engineer | Banffy (BanffPay)

Sep 2026 – Present

Lagos, Nigeria · Hybrid · Fintech · App Store · Play Store

Cross-border remittance and multi-currency wallet platform serving Canada, Liberia, and Nigeria. I took over the React Native customer app, owning payment-flow integrity, security fixes, and store releases, and I built the Flutter remittance SDK that runs inside Banffy's agent app.

BanffPay Customer App — *React Native · TypeScript · iOS & Android*

- Own App Store and Play releases. Restored Android publishing after a lost upload key and rebuilt the iOS release pipeline for Apple's new SDK requirement
- Hardened the transfer flow against duplicate payments: double-tap guards, one in-flight request per transfer, and no automatic retry when a payment request's outcome is uncertain. On staging, each test transfer produced one debit that matched the transaction history
- Built a central API response handler that treats only explicit success codes as success, keeps pending transfers pending, and filters raw database errors out of customer messages
- Added FX quote expiry and balance checks to send money, exchange, and bill payments, so confirmation is blocked on an expired rate or an amount above the wallet balance
- Moved an embedded API secret out of the app into AWS Secrets Manager, stopped ID-document fields from being sent to analytics, and added rotating refresh-token sessions
- Built wallet-to-wallet transfers and moved bill payments onto the PIN-authorized flow, with remote kill switches through Firebase Remote Config. Set up Jest, Detox, and Maestro testing

Remittance SDK for the Agent App

Flutter · Dart

- Built a self-contained Flutter SDK for Banffy's agent app: bank deposit, cash pickup, and mobile wallet transfers plus cash payouts, with KYC ID capture, name enquiry, FX and fee quotes, PIN authorization, and receipts
- Designed for uncertain outcomes: one idempotency key per transfer, no retries on payment requests, and a timeout becomes "outcome unknown" and is checked by lookup instead of being shown as a failure. Verified end to end on staging

Lead Mobile & Full-Stack Engineer | JustParkwell

Jun 2022 – Aug 2026

Lagos, Nigeria · Remote · App Store · Play Store

Led mobile for a parking platform as it grew from one market to four (Nigeria, US, Canada, Senegal): 2 Flutter apps, React dashboards, and a Python FastAPI backend.

- Led a team of 5 developers: set the code review standards, shared architecture patterns, and coding guidelines used across the platform
- Led the platform's modernization: moved the mobile app from Ionic React and GraphQL to Flutter, and the web from Vue to React/Next.js, for better performance and one maintainable codebase per surface
- Cut startup time by 30% and package size by 25% across both apps with deferred loading and asset optimization
- Wrote native interop through platform channels: geofencing and custom map annotations for the real-time map, and NFC tag read/write/debit for parking enforcement. Owned App Store and Play releases for both apps
- Set up country-routed payments (Paystack for NGN/XOF, Stripe for USD/CAD, Wave for Senegal) with webhook signature verification and idempotent wallet crediting, plus Shorebird for OTA hotfixes

Senior Mobile Engineer | Dorveila Consulting

Apr 2023 – Present

Lagos, Nigeria · Remote · Independent / Contract

Contract work alongside my full-time role, shipping production apps for clients in fintech, real estate, logistics, and events.

onDgo: Fintech Super App

Jun 2025 – Present

- Building a Flutter fintech super app with 15+ services in production: wallets with virtual accounts, bank transfers with name-enquiry checks, bill payments (Remita), and flight booking on Crane and Videcom GDS APIs

Niply Fintech: B2B Invoicing & Payments

Apr 2023 – Oct 2023

- Built a B2B invoicing and payments app in Flutter from scratch (automated invoices, digital receipts, payment tracking) and took it to the App Store, then moved its architecture to Riverpod with code generation

Tasty Tokens: NFC Loyalty Platform

May 2024 – Aug 2024 · Ontario, Canada

- Built an NFC loyalty app on a native platform channel with sub-500ms scans for 150+ restaurants, plus a Hive offline queue that stores scans locally and syncs them when connectivity returns

Also delivered: CCDL (React Native real estate and investment app), Foursquare Convention (React Native app and Laravel API), WareFlow One (Flutter inventory scanning with MLKit), and Crafflux (real-time booking).

Mobile Developer | Bypenth Softwares & Admoni Inc.

Jan 2018 – May 2022

Lagos, Nigeria

- Shipped 10+ web and mobile apps at a software agency and handled the App Store and Play release cycle for 5+ of them: provisioning, code signing, staged rollouts
- Started as a junior and left as a senior, taking over architecture decisions and client delivery timelines

EDUCATION

B.Sc. in Computer Science

Tai Solarin University of Education, Nigeria
