## SENIOR SOFTWARE ENGINEER

timidev34@gmail.com | +234 806 826 3980 (WhatsApp) | Lagos, Nigeria
LinkedIn | Portfolio | GitHub

## PROFESSIONAL SUMMARY

Senior Software Engineer with 8+ years building mobile apps, web frontends, and the APIs behind them, across fintech, mobility, and real estate. I go deep in cross-platform mobile (Flutter, React Native) and work across the stack in Python FastAPI, Laravel, React, and Next.js. I have led delivery and mentored distributed teams, and I currently build cross-border payments at Banffy (BanffPay).

## TECHNICAL SKILLS

| | |
|---|---|
| **Mobile** | Flutter, Dart, React Native, TypeScript, Expo, native modules and platform channels (Swift/Kotlin), Riverpod, BLoC/Cubit, MobX |
| **Web** | React, Next.js, Vue, Tailwind CSS, Redux Toolkit, RTK Query, TanStack Query, Zustand |
| **Backend & Data** | Python FastAPI, SQLAlchemy, Celery, Laravel (PHP), Node.js, REST, GraphQL, WebSockets, PostgreSQL, Redis, Alembic |
| **Payments & Security** | Stripe, Paystack, Wave, Remita, webhook verification, idempotency, multi-tenancy, RBAC, refresh-token sessions, AWS Secrets Manager |
| **DevOps & Quality** | Docker, GitHub Actions, EAS, Fastlane, Codemagic, Shorebird, Jest, Detox, Maestro, Pytest, Pest PHP, Sentry |

## WORK EXPERIENCE

### **Senior Mobile Engineer** | Banffy (BanffPay)

*Sep 2026 – Present*

Lagos, Nigeria · Hybrid · Fintech · App Store · Play Store

Cross-border remittance and multi-currency wallet platform serving Canada, Liberia, and Nigeria. I took over the React Native customer app (payment-flow integrity, security, and store releases) and built the Flutter remittance SDK that runs inside Banffy's agent app.

- Own the customer app's App Store and Play releases. Restored Android publishing after a lost upload key and rebuilt the iOS release pipeline for Apple's new SDK requirement
- Hardened transfers against duplicate payments with double-tap guards and no automatic retry when a payment's outcome is uncertain, and built a central API response handler that treats only explicit success codes as success and filters raw database errors out of customer messages
- Added FX quote expiry and balance checks to send money, exchange, and bill payments, and built wallet-to-wallet transfers behind Firebase Remote Config kill switches
- Moved an embedded API secret out of the app into AWS Secrets Manager, stopped ID-document fields from being sent to analytics, and added rotating refresh-token sessions
- Built a Flutter remittance SDK for the agent app (bank deposit, cash pickup, mobile wallet, and payouts) with one idempotency key per transfer and a timeout treated as "outcome unknown" and checked by lookup. Verified end to end on staging

### **Lead Mobile & Full-Stack Engineer** | JustParkwell

*Jun 2022 – Aug 2026*

Lagos, Nigeria · Remote · App Store · Play Store

Owned the technical stack for a parking platform as it grew from one market to four (Nigeria, US, Canada, Senegal): 2 Flutter apps, 3 React dashboards, and a Python FastAPI backend.

- Led a team of 5 developers: set the code review standards, shared architecture patterns, and coding guidelines used across the platform

- Built the core FastAPI backend with SQLAlchemy, Celery workers, Redis caching, and Alembic migrations, the single source of truth for every client app
- Designed country-scoped multi-tenant isolation at the service layer, with data separated per market and role-based access across 6 roles
- Set up country-routed payments (Paystack for NGN/XOF, Stripe for USD/CAD, Wave for Senegal) with webhook signature verification and idempotent wallet crediting
- Led the platform's modernization: moved the mobile app from Ionic React and GraphQL to Flutter, and the web from Vue to React/Next.js, for better performance and one maintainable codebase per surface
- Built three React dashboards (admin, partner, customer) with Redux Toolkit, RBAC, and English/French i18n. Cut mobile startup time by 30% and package size by 25%, and set up Shorebird OTA and CI/CD with EAS, Fastlane, and Docker

### **Senior Software Engineer** | Dorveila Consulting

*Apr 2023 – Mar 2026*

Lagos, Nigeria · Remote · Independent / Contract

Contract work alongside my full-time role at JustParkwell, shipping production apps and APIs for clients in fintech, real estate, logistics, and events.

#### onDgo: Fintech Super App

*Jun 2025 – Mar 2026*

- Built a Flutter fintech super app with 15+ services in production: wallets, bill payments (Remita), and flight booking on Crane and Videcom GDS APIs with vendor-specific pricing and multi-city search
- Built the wallet system: virtual account generation, balances across multiple wallets, and wallet-to-bank transfers with name-enquiry checks

#### Foursquare Convention: Event Platform + API

*Apr 2025 – Jul 2025*

- Built both sides: the React Native/Expo app and a Laravel API with 20+ endpoints for events, registrations, accommodation, donations, and a marketplace, on Sanctum auth and PostgreSQL
- Integrated Paystack and Remita as dual payment gateways, with custom Artisan commands that reconcile pending payment statuses, plus a Cloudinary media pipeline

#### CCDL: Real Estate Marketplace & Investment App

*Aug 2025 – Mar 2026*

- Built a real estate marketplace and investment app in React Native on Feature-Sliced Design, with RTK Query caching and optimistic updates for the investment and transaction flows

Also delivered: WareFlow One (Flutter inventory scanning with MLKit, plus a Next.js operations dashboard), Niply (Flutter B2B invoicing), Tasty Tokens (Flutter NFC loyalty), and Crafflux (real-time booking).

### **Mobile Developer** | Bypenth Softwares & Admoni Inc.

*Jan 2018 – May 2022*

Lagos, Nigeria

- Shipped 10+ web and mobile apps at a software agency and handled the App Store and Play release cycle for 5+ of them: provisioning, code signing, staged rollouts
- Started as a junior and left as a senior, taking over architecture decisions and client delivery timelines

## EDUCATION

### B.Sc. in Computer Science

Tai Solarin University of Education, Nigeria
