PROFESSIONAL SUMMARY

Senior Software Engineer and Tech Lead with 8+ years building production applications across mobile, web, and backend. I go deep in cross-platform mobile (Flutter, React Native/Expo) and wide across the stack: Python FastAPI, Laravel, React, Next.js. I have shipped 30+ apps with 98% crash-free rates in fintech, mobility, real estate, and SaaS. I lead distributed teams, design multi-tenant systems, and own the full cycle from database schema to App Store release.

TECHNICAL SKILLS

Languages	Dart, TypeScript, JavaScript, Python, PHP, SQL
Mobile	Flutter, React Native, Expo Router, Ionic React, NativeWind, native platform channels / native modules (Swift/Kotlin interop)
Frontend	React, Next.js, Vue, Tailwind CSS, SCSS, Redux Toolkit, RTK Query, React Query, Framer Motion
Backend & API	Python FastAPI, Laravel (PHP), Node.js, SQLAlchemy, Celery, REST, GraphQL, WebSockets, Sanctum/JWT, Headless CMS
Architecture & State	Clean Architecture, SOLID, Feature-Sliced Design (FSD), BLoC/Cubit, Riverpod (code-gen), Redux Toolkit (RTK), Multi-Tenancy Patterns
Database & Offline	PostgreSQL, SQLite, Hive, Sqflite, MMKV, Redis, Alembic Migrations
DevOps & Cloud	Docker, GitHub Actions, EAS, Shorebird (Code Push), Fastlane, Xcode Cloud, Codemagic, Nginx, AWS
Integrations	Firebase (Auth, FCM, Firestore), Google Maps SDK, Stripe, Paystack, Wave Checkout, Remita, Clouinary, Contentful, Sentry, Mixpanel
Testing & Monitoring	Pytest, Pest PHP, Unit / Widget / Integration Testing, Sentry (crash analytics), Mixpanel (product analytics)

WORK EXPERIENCE

Senior Software Engineer & Tech Lead | JustParkwell Jun 2022 – Present
Lagos, Nigeria · Remote · [App Store](#) · [Play Store](#)

- Own the full technical stack for a multi-country parking platform: 2 Flutter mobile apps, 3 React web dashboards, and a Python FastAPI backend. Grew the platform from one market to four countries (Nigeria, US, Canada, Senegal).
- Built the core backend API in Python FastAPI with SQLAlchemy 2, Celery workers, Redis caching, and Alembic migrations. It is the single source of truth for every client app
 - Designed country-scoped multi-tenant isolation at the service layer, with data strictly separated per market across 4 countries and role-based access across 6 roles
 - Set up country-routed payments: Paystack for NGN/XOF, Stripe for USD/CAD, Wave Checkout for Senegal. Each gateway has webhook signature verification and idempotent wallet crediting
 - Led the platform's modernization: migrated the mobile app from Ionic React with a GraphQL API to Flutter, and the web frontend from Vue to a React/Next.js stack
 - Cut mobile startup time by 30% and package size by 25% with deferred loading and asset optimization. Crash-free rate sits above 98% across both Flutter apps
 - Built three React dashboards (admin, partner, customer-facing) with Redux Toolkit, PrimeReact tables, RBAC, and i18n in English and French
 - Built the real-time map with Google Maps SDK: custom markers, polyline directions, geofencing for parking validation, and live slot availability for thousands of concurrent users
 - Set up Shorebird for OTA updates and CI/CD via EAS, Fastlane, and Docker. Critical hotfixes now ship in hours, not days
 - Mentored 5 developers. Set code review standards, shared architecture patterns, and coding guidelines across the platform

Senior Software Engineer | Dorveila Consulting Apr 2023 – Present
Lagos, Nigeria · Remote · Independent / Contract

Independent contract work taken on alongside my full-time role. Shipped production apps and APIs for clients in fintech, real estate, logistics, and events, usually on tight timelines and often owning the full release.

- onDgo: Fintech Super App (15+ Services)** Jun 2025 – Present
- Building a fintech super app in Flutter covering wallets, flight booking, bill payments (Remita), bank/wallet transfers, and utility services. 15+ service modules in production
 - Designed a multi-vendor flight booking engine integrating Crane and Videcom GDS APIs with vendor-specific pricing, multi-city aggregation, and extras prefetching
 - Wallet system handles virtual account generation, balance management across multiple wallets, and wallet-to-bank transfers with name-enquiry verification
 - State via hooks_riverpod with code-gen notifiers, Freezed models, and Dio with Hive-backed cache interceptors for offline resilience

CCDL: Real Estate Marketplace & Investment Platform	<i>Aug 2025 – Mar 2026</i>
• Built a real estate marketplace and investment platform in React Native (Expo SDK 54, Expo Router, NativeWind) with heavy data screens, complex filtering, and map views • Enforced Feature-Sliced Design (FSD) with strict unidirectional imports. Consumer flows, agent tools, and investment modules are fully isolated • Wired up RTK Query for all API calls with optimistic updates, automatic retries, and cache invalidation. Financial transactions needed zero tolerance for dropped requests	
Foursquare Convention: High-Traffic Event Platform	<i>Apr 2025 – Jul 2025</i>
• Built both sides: the React Native/Expo mobile app and the Laravel 11 API backend. 20+ endpoints covering events, registrations, accommodations, donations, and a marketplace • Integrated Paystack and Remita (RRR-based) as dual payment gateways. Wrote custom Artisan commands to reconcile pending payment statuses automatically • Set up a Cloudinary media pipeline with per-entity image presets and a custom Mailtrap transport for transactional emails	
Crafflux Technologies: Real-Time Booking & Chat System	<i>Oct 2024 – Dec 2024</i>
• Built a real-time on-demand artisan booking platform with live availability, in-app chat, and photo verification for job completion before payment release • Real-time architecture on Firebase Cloud Messaging, Firestore triggers, and WebSockets, with Paystack in-app payments and earnings withdrawal to bank	
Tasty Tokens: NFC Loyalty Platform	<i>May 2024 – Aug 2024 · Ontario, Canada</i>
• Built an NFC loyalty app with scan latency under 500ms for high-traffic retail counters. 150+ restaurants, 98% scan success across 50+ device models • Designed the offline-first layer with Hive and queue-based sync. Zero data loss during intermittent connectivity • Added Mixpanel and Intercom. Campaign conversion went up 35%, support response time dropped 40%	
WareFlow One: Logistics & Inventory Platform	<i>Sep 2023 – Feb 2024</i>
• Built a barcode scanner with Google MLKit for on-device inventory scanning. 60% faster than manual entry • Wrote offline sync logic with Hive + Firebase so field teams could keep working in warehouses with bad connectivity. Paired it with a Next.js operations dashboard	
NiPLY Fintech: B2B Invoicing & Payment Platform	<i>Apr 2023 – Oct 2023</i>
• Built a B2B invoicing platform from scratch: automated invoices, digital receipts, real-time payment tracking. Zero to App Store • Replaced the legacy architecture with Riverpod + code generation. Feature delivery speed improved 40%	
Mobile Developer Bypenth Softwares & Admoni Inc.	<i>Jan 2018 – May 2022</i>
Lagos, Nigeria	
• Shipped 10+ web and mobile apps at a software agency. E-commerce, logistics, social apps, enterprise tools • Handled the full release cycle for 5+ apps on App Store and Google Play: provisioning, code signing, staged rollouts • Started as a junior, left as a senior. Gradually took over architecture decisions and client delivery timelines	

EDUCATION

B.Sc. in Computer Science
Tai Solarin University of Education, Nigeria
