PROFESSIONAL SUMMARY

Senior Mobile Engineer and Tech Lead with 8+ years shipping cross-platform apps in Flutter and React Native/Expo. I've put 30+ apps in production with 98% crash-free rates across fintech, mobility, real estate, and SaaS. When the project calls for it, I go full-stack: Python FastAPI, Laravel, React, Next.js. I lead distributed teams, architect multi-tenant systems, and own the full cycle from API design to App Store release.

TECHNICAL SKILLS

Core Mobile & Frontend	Flutter, Dart, React Native, Expo Router, React, Next.js, NativeWind, Tailwind CSS, SCSS, Framer Motion, Custom Animations, UI/UX Design
Backend & API	Python FastAPI, Laravel, SQLAlchemy, Celery, Redis, RESTful APIs, WebSockets, Headless CMS Architecture, Sanctum/JWT Authentication
Architecture & State	Feature-Sliced Design (FSD), Clean Architecture, SOLID Principles, BLoC/Cubit, Riverpod (code-gen), Redux Toolkit (RTK), RTK Query, GetX, Multi-Tenancy Patterns
Database & Offline-First	PostgreSQL, SQLite, Hive, Sqflite, MMKV, SecureStore, Shared Preferences, Alembic Migrations
DevOps, Cloud & Tooling	Docker, GitHub Actions, EAS, Shorebird (Code Push), Fastlane, Xcode Cloud, Codemagic, Redis, Nginx, AWS
Third-Party & Integrations	Firebase (Auth, FCM, Firestore, Storage), Google Maps SDK, Stripe SDK, Paystack SDK, Wave Checkout API, Cloudinary, Contentful CMS, Sentry, Mixpanel, Intercom, OneSignal
Testing & Monitoring	Unit Testing, Widget Testing, Integration Testing, Pest PHP, Pytest, Sentry, Mixpanel, MLKit (on-device ML)

WORK EXPERIENCE

Senior Flutter Developer & Tech Lead | JustParkwell

Jun 2022 – Present

Lagos, Nigeria · Remote · [App Store](#) · [Play Store](#)

Own the full technical stack for a multi-country parking platform: 2 Flutter mobile apps, 3 React web dashboards, and a Python FastAPI backend. Grew the platform from one market to four countries (Nigeria, US, Canada, Senegal).

- Cut mobile startup time by 30% and package size by 25% with deferred loading and asset optimization. Crash-free rate sits above 98% across both Flutter apps
- Built the real-time map with Google Maps SDK: custom markers, geofencing for parking validation, live slot availability for thousands of concurrent users
- Set up Shorebird for OTA updates and CI/CD via EAS, Fastlane, and Docker. Critical hotfixes now ship in hours, not days
- Set up country-routed payments: Paystack for NGN/XOF, Stripe for USD/CAD, Wave Checkout for Senegal. Each gateway has webhook signature verification and idempotent wallet crediting
- Built the core backend API in Python FastAPI with SQLAlchemy, Celery workers, Redis caching, and Alembic migrations. Single source of truth for every client app
- Built three React dashboards (admin, partner, customer-facing) with Redux Toolkit, PrimeReact tables, RBAC, and i18n in English and French
- Designed country-scoped multi-tenant isolation at the service layer. Data strictly separated per market across 4 countries
- Mentored 5 developers. Set up code review standards, shared architecture patterns, and coding guidelines across the platform

Independent Mobile & Full-Stack Consultant

Apr 2023 – Present

Lagos, Nigeria · Remote

Took on contract work alongside my full-time role. Shipped production apps for clients in fintech, real estate, logistics, and events, usually on tight timelines.

onDgo: Fintech Super App (15+ Services)

Jun 2025 – Present

- Building a fintech super app in Flutter covering wallets, flight booking, bill payments (Remita), bank/wallet transfers, and utility services. 15+ service modules in production
- Designed a multi-vendor flight booking engine integrating Crane and Videcom GDS APIs with vendor-specific pricing services, multi-city aggregation, and extras/add-ons prefetching
- Wallet system handles virtual account generation, balance management across multiple wallets, and wallet-to-bank transfers with name enquiry verification
- All state managed through hooks_riverpod with code-gen notifiers, freezed models, and Dio with cache interceptors for offline resilience

CCDL: Real Estate Marketplace & Investment Platform

Aug 2025 – Mar 2026

- Built a real estate marketplace and investment platform in React Native with Expo Router and NativeWind. Heavy data screens, complex filtering, map views
- Enforced Feature-Sliced Design (FSD) with strict unidirectional imports. Consumer flows, agent tools, and investment modules are fully isolated
- Wired up RTK Query for all API calls with optimistic updates, automatic retries, and cache invalidation. Financial transactions needed zero tolerance for dropped requests

Foursquare Convention: High-Traffic Event Platform

Apr 2025 – Jul 2025

- Built both sides: the React Native/Expo mobile app and the Laravel API backend. 20+ endpoints covering events, registrations, accommodations, donations, and a marketplace
- Integrated Paystack and Remita (RRR-based) as dual payment gateways. Wrote custom Artisan commands to reconcile pending payment statuses automatically
- Set up a Cloudinary media pipeline with per-entity image presets and a custom Mailtrap transport for transactional emails

Crafflux Technologies: Real-Time Booking & Chat System

Oct 2024 – Dec 2024

- Built a real-time booking and chat system with Firebase Cloud Messaging, Firestore triggers, and Paystack in-app payments. 10K+ concurrent users, 10M+ monthly transactions

Tasty Tokens: NFC Loyalty Platform

May 2024 – Aug 2024 · Ontario, Canada

- Built an NFC loyalty app. Got scan latency under 500ms for high-traffic retail counters
- Designed the offline-first layer with Hive and queue-based sync. Zero data loss during intermittent connectivity
- Added Mixpanel and Intercom. Campaign conversion went up 35%, support response time dropped 40%

WareFlow One: Logistics & Inventory Platform

Sep 2023 – Feb 2024

- Built a barcode scanner with Google MLKit for on-device inventory scanning. 60% faster vs. manual entry
- Wrote offline sync logic with Hive + Firebase so field teams could keep working in warehouses with bad connectivity

Niply Fintech: B2B Invoicing & Payment Platform

Apr 2023 – Oct 2023

- Built a B2B invoicing platform from scratch: automated invoices, digital receipts, real-time payment tracking. Zero to App Store
- Ripped out legacy architecture and rebuilt with Riverpod + code generation. Feature delivery speed improved 40%

Mobile Developer | Bypenth Softwares & Admoni Inc.

Jan 2018 – May 2022

Lagos, Nigeria

- Shipped 10+ web and mobile apps at a software agency. E-commerce, logistics, social apps, enterprise tools
- Handled the full release cycle for 5+ apps on App Store and Google Play: provisioning, code signing, staged rollouts
- Started as a junior, left as a senior. Gradually took over architecture decisions and client delivery timelines

EDUCATION

B.Sc. in Computer Science

Tai Solarin Federal University of Education, Nigeria
